SUPPORTED FORMAT

`.eml` · RFC 5322 email

MODEL

`SGDClassifier` · linear classifier

PHISHGUARD · VERSION 2.0

SECURITY OPERATIONS CENTER / EMAIL PROTECTION

See threats before they reach your inbox.

PhishGuard analyzes uploaded email messages using a machine-learning pipeline to identify phishing attempts and legitimate communication.

EMAILS ANALYZED	PHISHING DETECTED	LEGITIMATE	API STATUS
2	1	1	ONLINE
This session	Flagged by the model	Classified as legitimate	FastAPI service

PRIMARY ACTION

Scan an email

Upload an .eml message and run it through the connected phishing detection model.

Open email scanner →

DETECTION PIPELINE

01 **Parse message**
Read headers, body and attachments.

02 **Extract features**
Generate the 18 model input features.

03 **Transform & classify**
Apply preprocessing and SGD classification.

04 **Return result**
Display the predicted email category.
