THREAT ANALYSIS / FILE INSPECTION
Email scanner
Submit an email file for machine-learning analysis.
Upload email message
Select an RFC 5322 .eml file. The file is sent to your configured FastAPI backend for analysis.
Choose .eml files
Upload
200MB per file • EML
Analyze 0 email(s)
Files are analyzed sequentially, one API request per email. Upload only messages you are authorized to inspect. Files are not saved to the frontend project folder.
BEFORE YOU SCAN
Use emails saved as .eml.
Select up to 10 files per batch.
Do not upload confidential messages to an untrusted API host.
Batch analysis report
Results for the most recently submitted batch.
